

# Test Plan 10 — Marketing Accessibility

|         |                                                             |
|---------|-------------------------------------------------------------|
|         |                                                             |
| Project | accessibility                                               |
| Specs   | tests/accessibility/homepage-accessibility.spec.ts          |
| Target  | Public Hebrew marketing homepage ( https://www.organuz.ai ) |
| Client  | Chromium + @axe-core/playwright                             |
| Cases   | 30                                                          |
| CI      | Blocking matrix shard in parallel-tests.yml                 |

## Scope

Thirty top-priority automated accessibility checks cover WCAG 2.0/2.1 A and AA rules, language and RTL metadata, zoom support, heading structure, landmark presence, unique IDs, image alternatives, iframe titles, natural focus order, safe new-tab links, form semantics, and valid ARIA references.

The production page currently has five known critical/serious Axe rule groups. Each has a non-growing affected-node budget: improvements stay green, while a new rule or additional affected node fails CI. Delete a budget as soon as its website issue is fixed; do not raise budgets to accommodate regressions.

## Run

```
npx playwright test --project=accessibility
```
